Larry Williams' Patterns for Profit

Larry Williams' Patterns for Profit is a tool that can help you quickly find bar patterns in the past on a chart that match the current price bar pattern. When it finds the matching patterns it allows you to view the average behavior of this symbol after this pattern occurred.

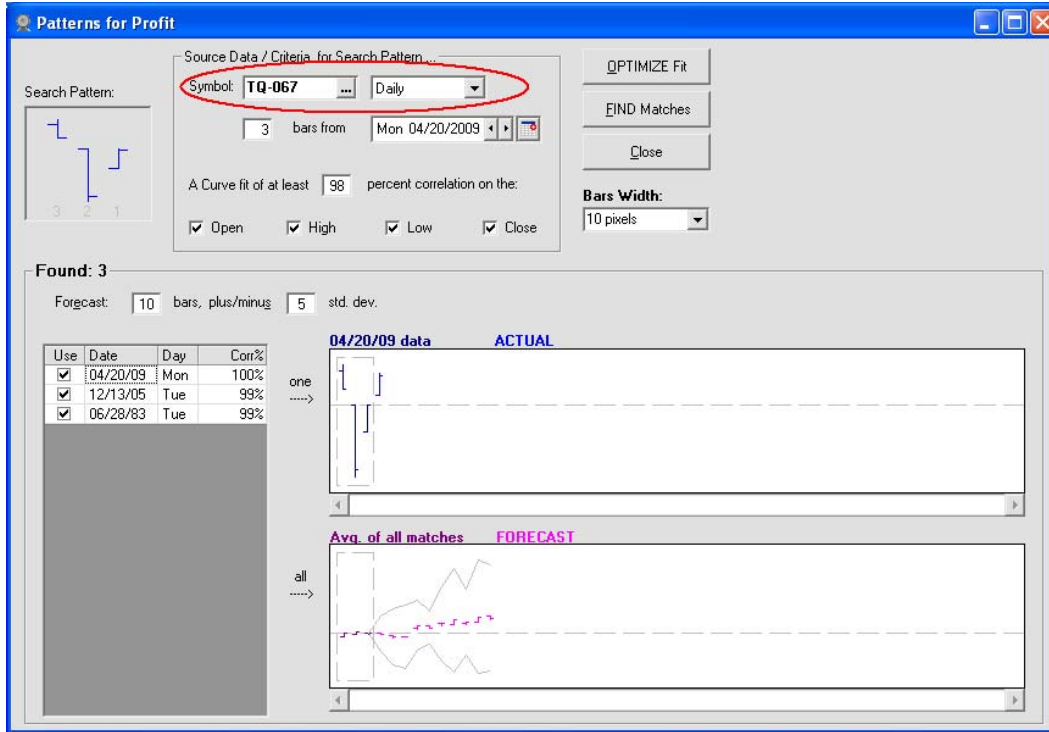

Using Patterns for Profit gives you a unique insight into what direction the market is going to go next.

Patterns for Profit works best for finding short term patterns.

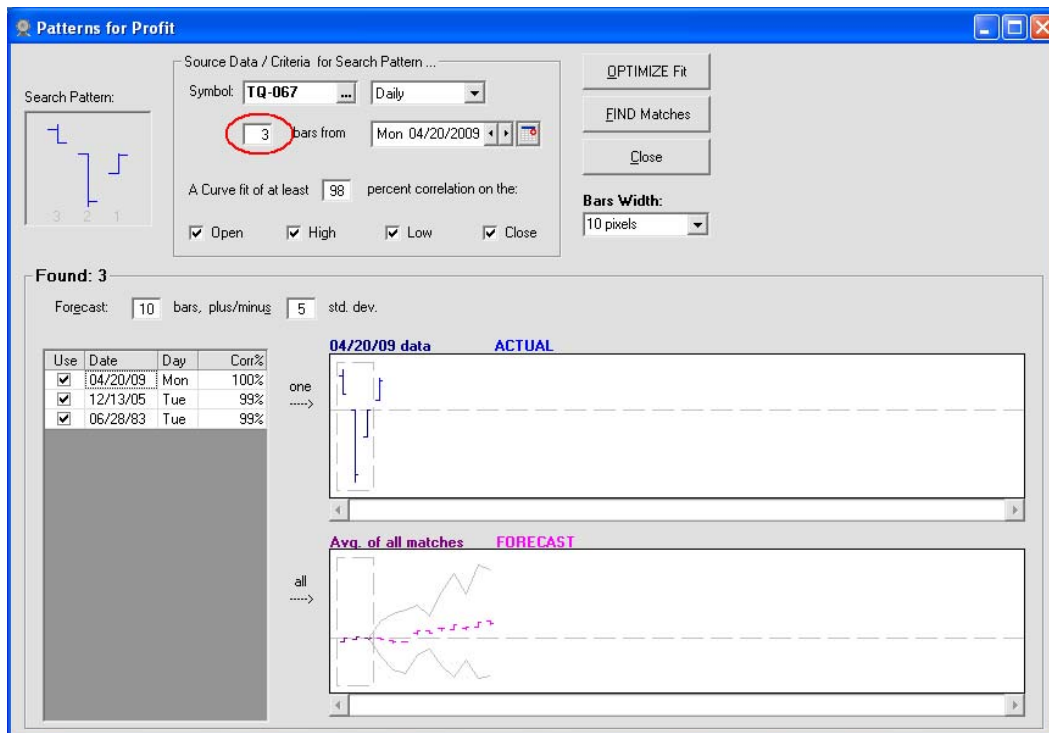

To get started using Patterns for Profit click on the crystal ball icon in Trade Navigator.

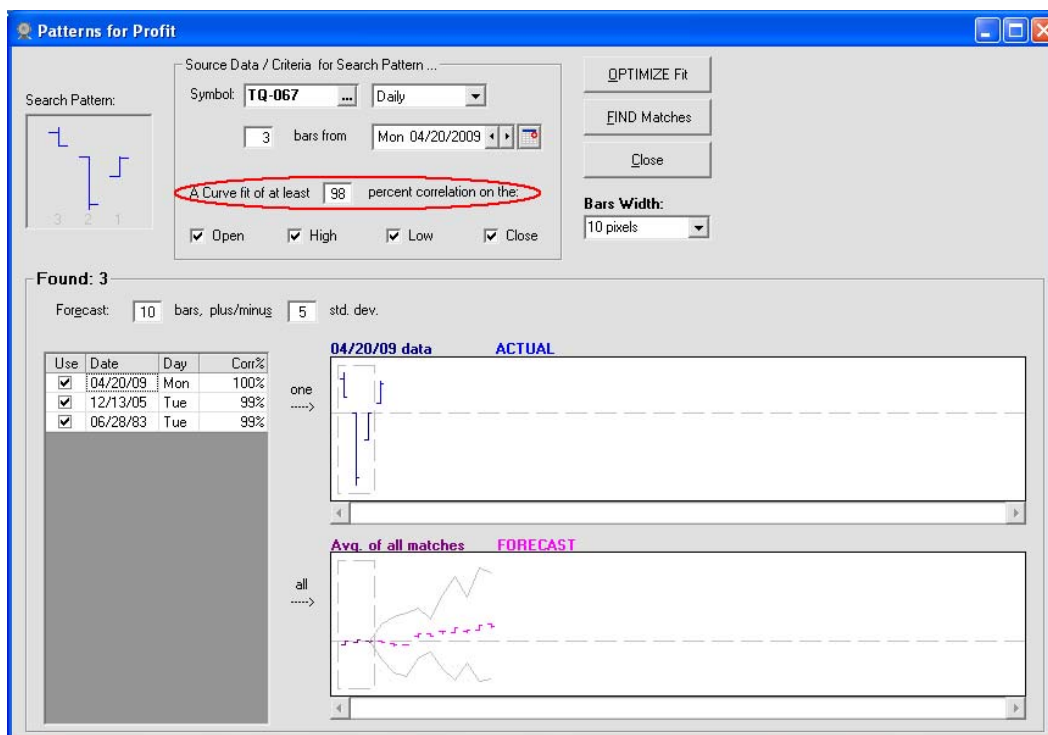

The Symbol settings allow you to select the symbol and bar time period to search for comparison patterns.

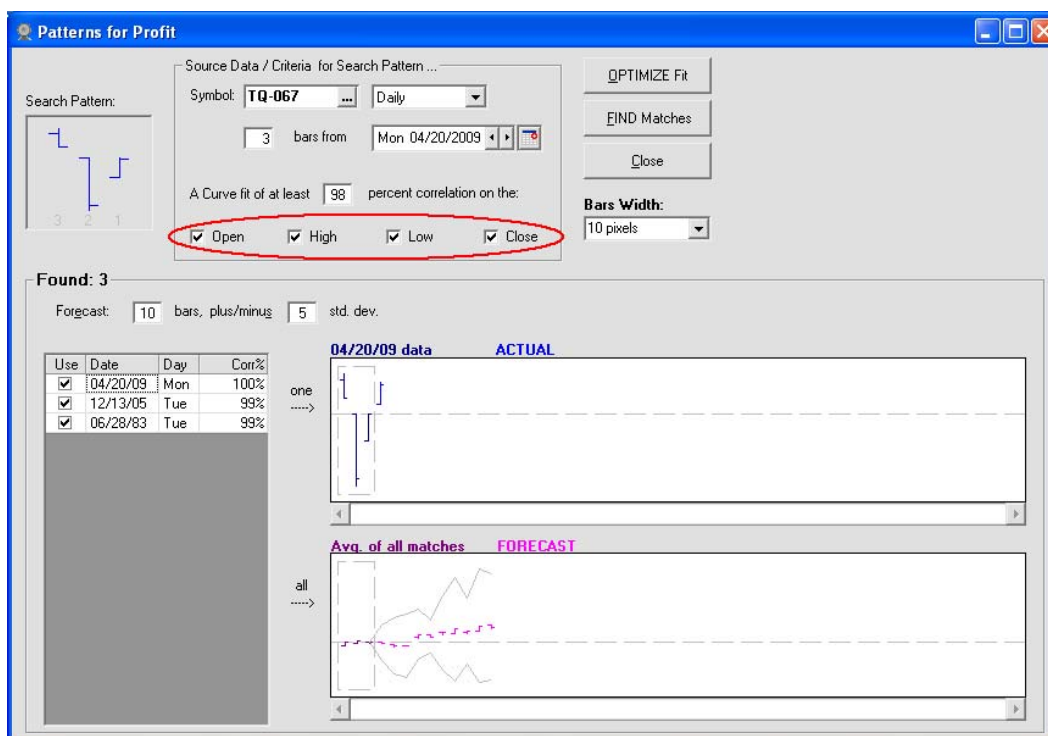

The bars from allows you to select the number of bars to include in the pattern.

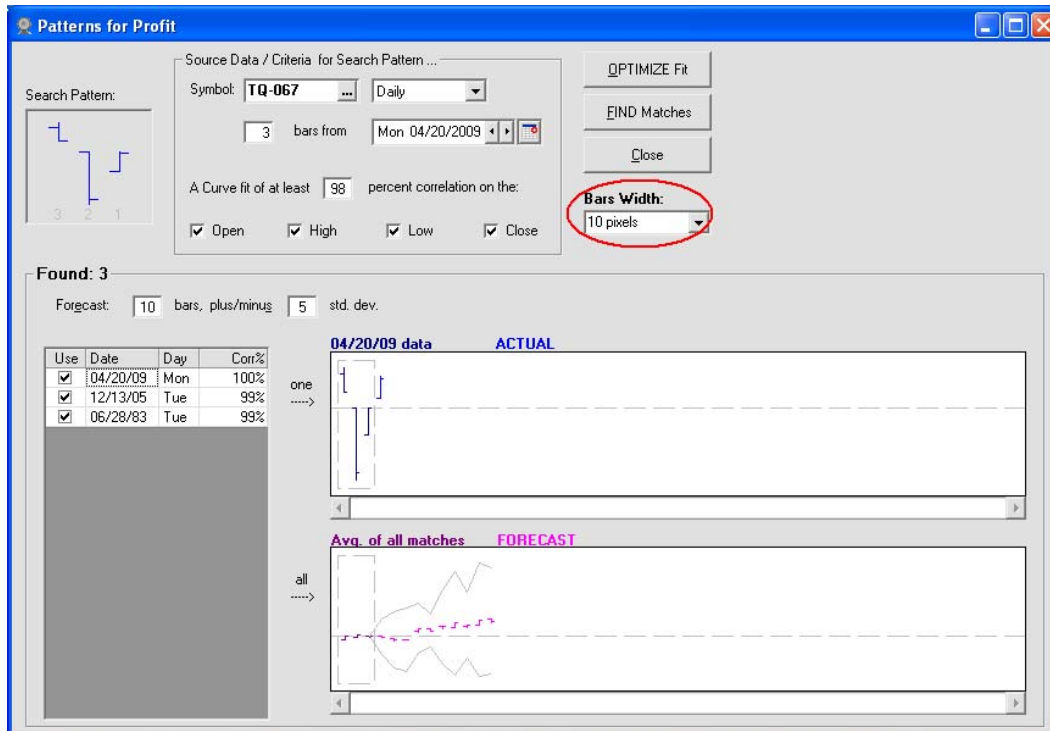

The Curve fit allows you to select how closely you would like the patterns to match using percentiles.

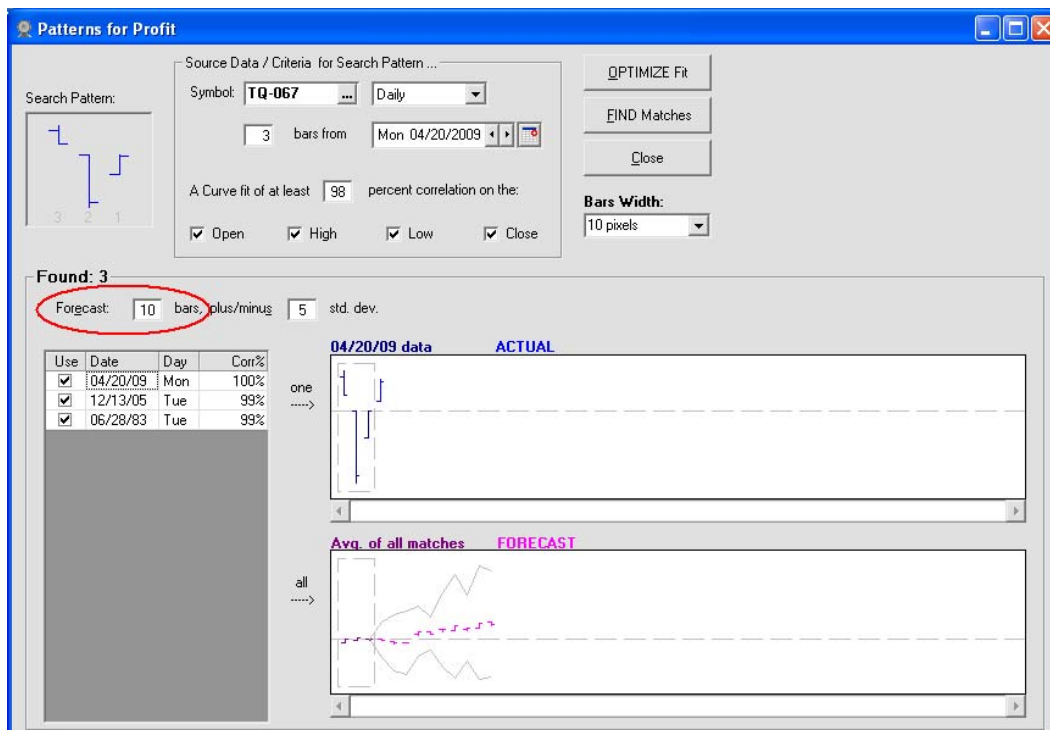

You can check or uncheck the parts of the price bar that you would like to use for matching the pattern. The open, the high, the low or the close.

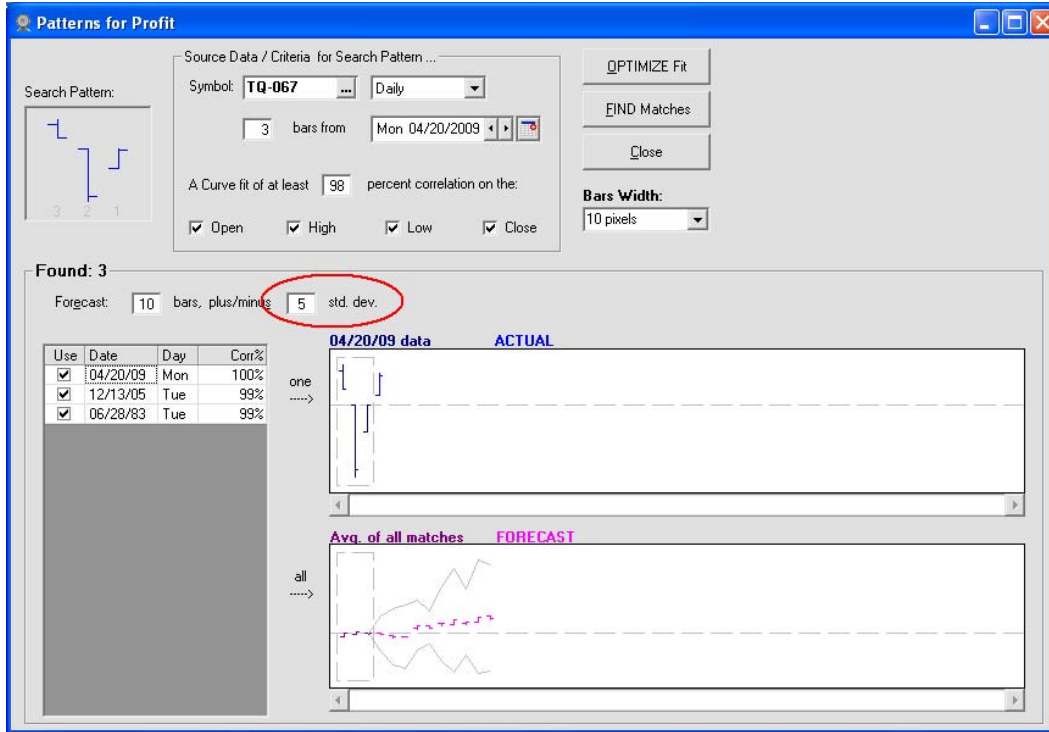

Bars Width allows you to change how closely spaced the bars are displayed and thus the size of the bars being displayed.

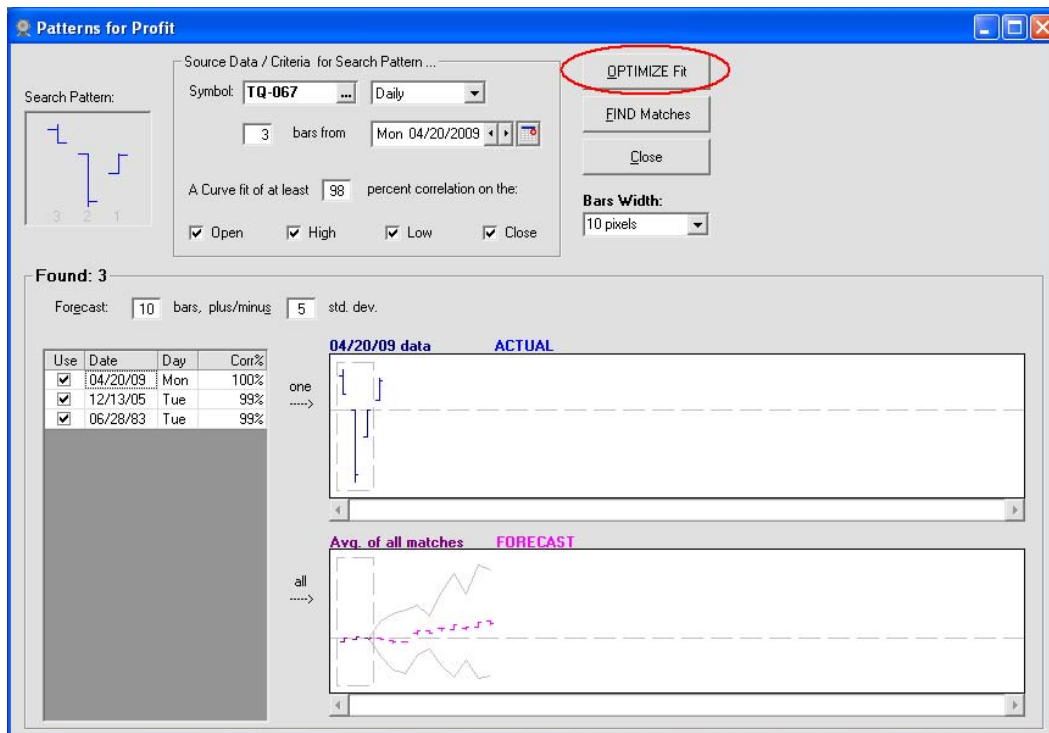

Forecast allows you to choose how many bars to display after the occurrence of the pattern. These bars are the average of the bars occurring after the pattern occurred each time in the past.

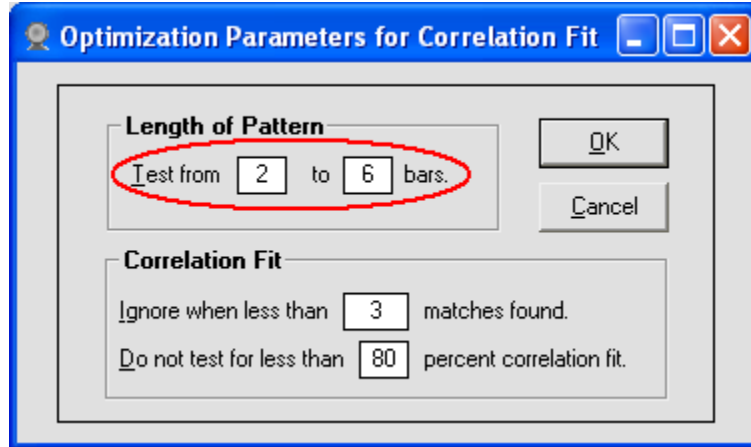

Setting the std. dev. allows you to select the amount of deviation to allow away from the average.

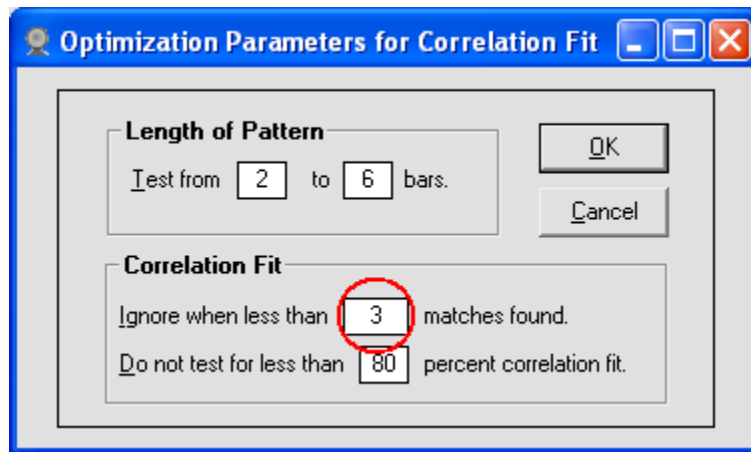

Click the Optimize Fit button if you wish to further refine the pattern.

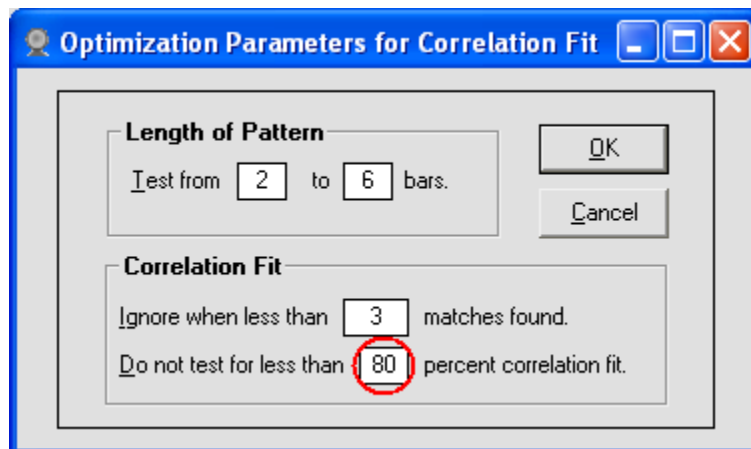

Length of pattern allows you to define how many bars are included in the pattern.

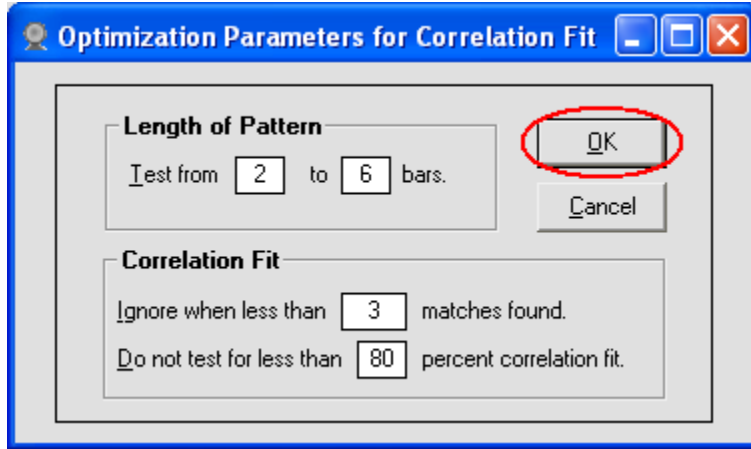

Correlation Fit allows you to set a minimum number of matches to include in the pattern.

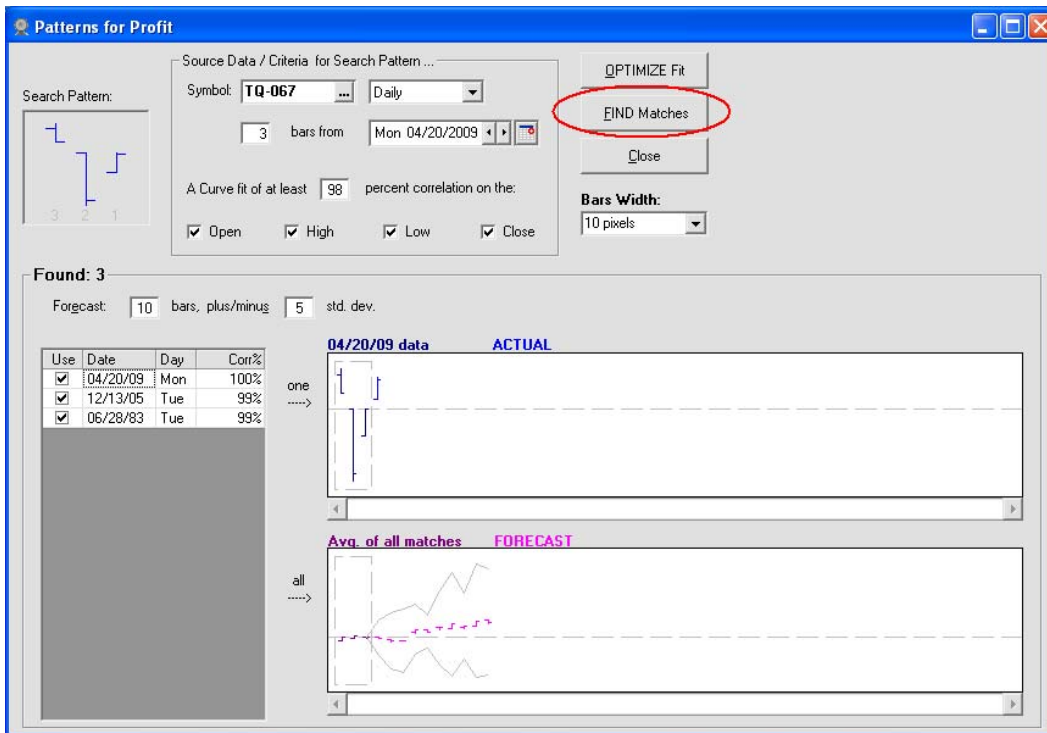

Correlation Fit also allows you to set a minimum percent correlation in patterns to test.

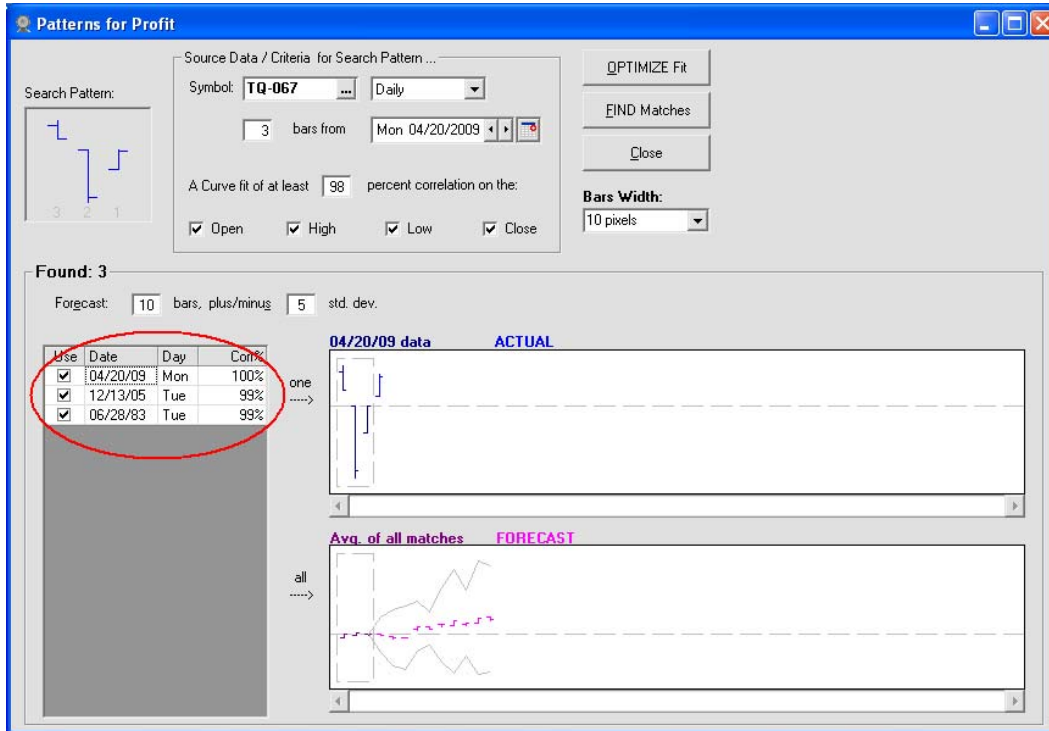

When you are finished refining the pattern parameters, click the OK button.

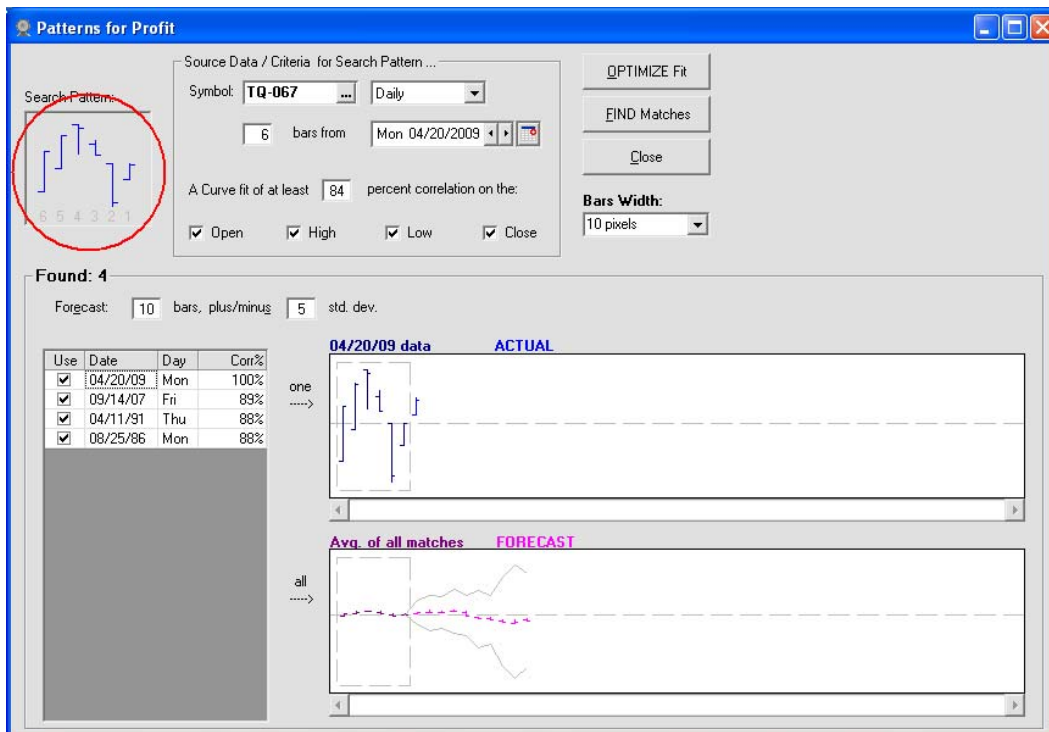

Click the Find Matches button to find the best matches for the parameters you have defined. To find the largest number of matches be sure to use continuous contracts, use a lower percent correlation, and only check one or two for Open, High, Low or Close.

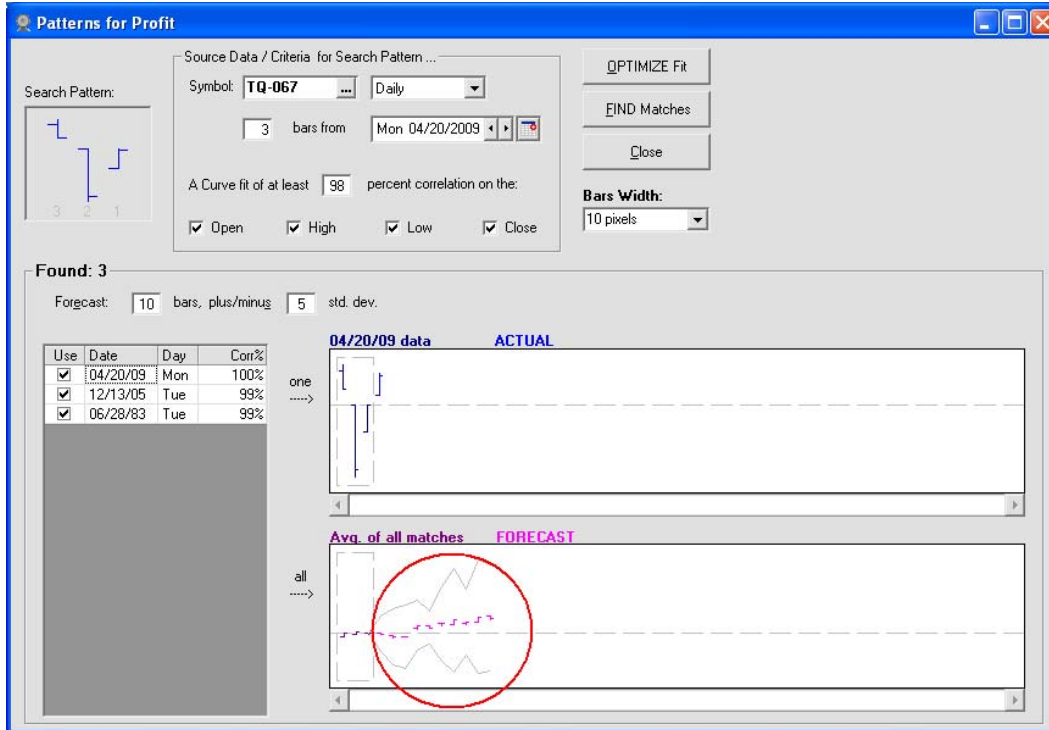

The column on the left will show how many matches are found, when the patterns occurred and how closely they match the pattern. The check boxes allow you to choose which ones to use in the Forecast.

The Search Pattern displays the pattern being searched for.

Forecast displays the average of each bar that occurred after the pattern in the past.

When you are finished, click the Close button to close Patterns for Profit.
